

NAG is delighted to support the Manchester Girl Geeks!

Encouraging more girls and women into computing, science and technology

February 2012 – The Numerical Algorithms Group (NAG) is delighted to announce its first collaboration of 2012 with the sponsorship of the Manchester Girl Geeks. The not-for-profit group, based in Manchester UK is part of the Girl Geek Dinner network, which organises networking events, talks and hands-on workshops for women and girls with an interest in science, technology, engineering and mathematics.

The Manchester Girl Geeks mission resonated loudly with NAG as we both share a not-for-profit status and have an objective of fostering new talent in computing, science and technology. NAG already awards a number of Student Prizes and offers [internal placements](#), but is always on the look-out for new initiatives in this area to support. NAG is looking forward to attending some of the Girl Geek events, and supporting the group in its very worthwhile mission.

“We’re really excited about the Manchester Girl Geeks work. NAG’s foundations are firmly placed in education and we strive to support students in various ways. We recognise that the amount of girls choosing technology led subjects at school and later in higher education is sadly low. The encouragement of the Manchester Girl Geeks group is a positive step towards reversing this trend.”

Susan Shayler, Chief Operating Office, Numerical Algorithms Group.

About NAG

The Numerical Algorithms Group (NAG) is dedicated to applying its unique expertise in numerical engineering to delivering high-quality computational software and high performance computing services. For 40 years NAG experts have worked closely with world-leading researchers in academia and industry to create powerful, reliable and flexible software which today is relied on by tens of thousands of individual users, as well as numerous independent software vendors. NAG serves its customers from offices in Oxford, Manchester, Chicago, Tokyo and Taipei, through staff in France and Germany, as well as via a global network of distributors.
