

NAG Toolbox

nag_mip_iqp_dense_optstr (h02cd)

1 Purpose

To supply individual optional parameters to nag_mip_iqp_dense (h02cb).

2 Syntax

```
nag_mip_iqp_dense_optstr(str)
h02cd(str)
```

3 Description

nag_mip_iqp_dense_optstr (h02cd) may be used to supply values for optional parameters to nag_mip_iqp_dense (h02cb). It is only necessary to call nag_mip_iqp_dense_optstr (h02cd) for those arguments whose values are to be different from their default values. One call to nag_mip_iqp_dense_optstr (h02cd) sets one argument value.

Each optional parameter is defined by a single character string of up to 72 characters, consisting of one or more items. The items associated with a given option must be separated by spaces, or equal signs [=]. Alphabetic characters may be upper or lower case. The string

```
Print level = 1
```

is an example of a string used to set an optional parameter. For each option the string contains one or more of the following items:

- a mandatory keyword;
- a phrase that qualifies the keyword;
- a number that specifies an integer or double value. Such numbers may be up to 16 contiguous characters in Fortran 77's I, F, E or D formats, terminated by a space if this is not the last item on the line.

Blank strings and comments are ignored. A comment begins with an asterisk (*) and all subsequent characters in the string are regarded as part of the comment.

Normally, each user-specified option is printed as it is defined, on the current advisory message unit (see nag_file_set_unit_advisory (x04ab)), but this printing may be suppressed using the keyword **Nolist**. Thus the statement

```
h02cd('Nolist')
```

suppresses printing of this and subsequent options. Printing will automatically be turned on again after a call to nag_mip_iqp_dense (h02cb), and may be turned on again at any time by you, by using the keyword **List**.

Optional parameter settings are preserved following a call to nag_mip_iqp_dense (h02cb), and so the keyword **Defaults** is provided to allow you to reset all the optional parameters to their default values by the statement,

```
h02cd('Defaults')
```

prior to a subsequent call to nag_mip_iqp_dense (h02cb).

A complete list of optional parameters, their abbreviations, synonyms and default values is given in Section 12 in nag_mip_iqp_dense (h02cb).

4 References

None.

5 Parameters

5.1 Compulsory Input Parameters

1: **str** – CHARACTER(*)

A single valid option string (as described in Section 3 above and in Section 12 in nag_mip_iqp_dense (h02cb)).

5.2 Optional Input Parameters

None.

5.3 Output Parameters

None.

6 Error Indicators and Warnings

7 Accuracy

Not applicable.

8 Further Comments

None.

9 Example

9.1 Program Text

```
function h02cd_example

fprintf('h02cd example results\n\n');

big = 1e25;
a = [ 1,      1,      1,      1,      1,      1,      1;
       0.15,   0.04,   0.02,   0.04,   0.02,   0.01,   0.03;
       0.03,   0.05,   0.08,   0.02,   0.06,   0.01,   0.00;
       0.02,   0.04,   0.01,   0.02,   0.02,   0.00,   0.00;
       0.02,   0.03,   0.00,   0.00,   0.01,   0.00,   0.00;
       0.70,   0.75,   0.80,   0.75,   0.80,   0.97,   0.00;
       0.02,   0.06,   0.08,   0.12,   0.02,   0.01,   0.97];
